

Absolute metric values relative to evaluation targets (no-P models excluded)

● Training seed 1 ■ Training seed 2 ▲ Training seed 3 -.- Evaluation target ■ Observed V0 value min-max

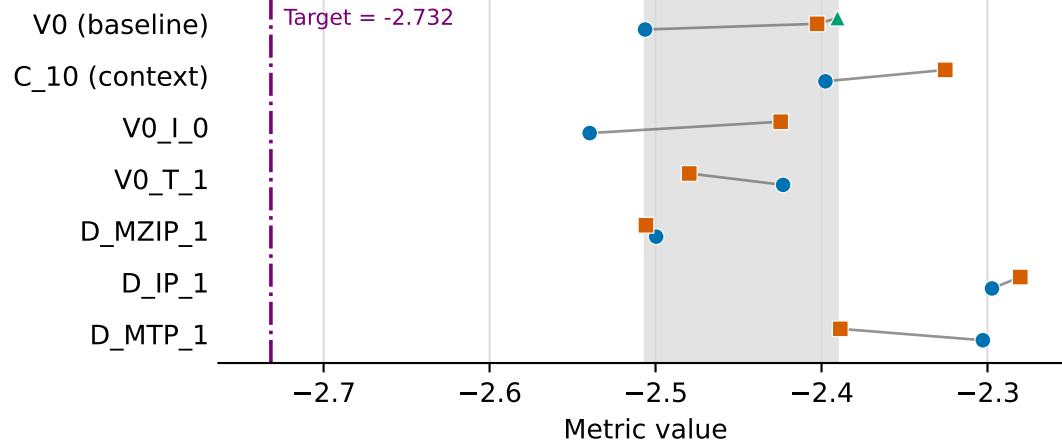

CRPS (lower is better)

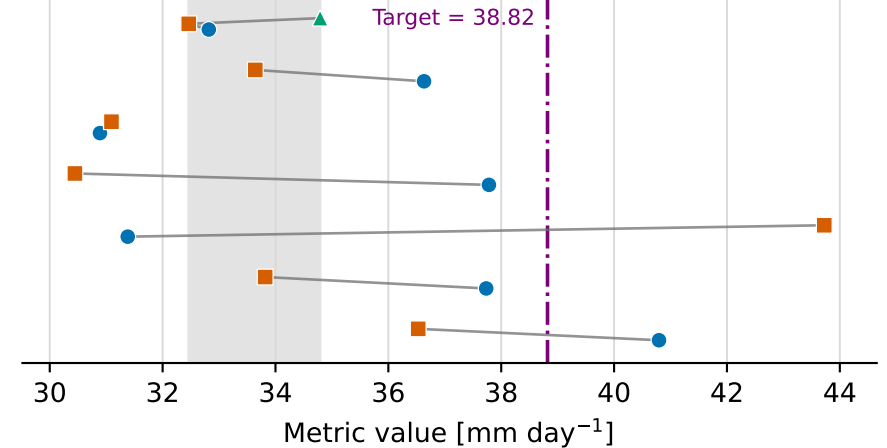

Integrated skill score (higher is better)

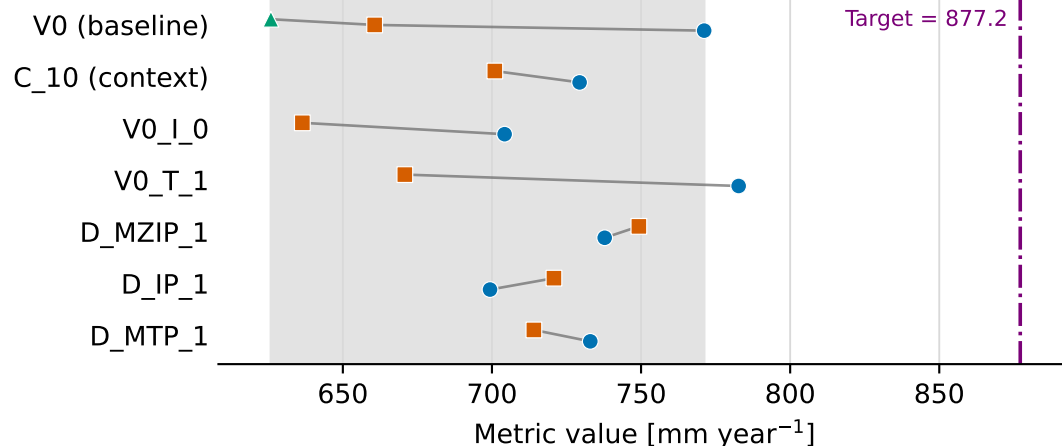

Mid-scale PSD slope (closer to HR is better)

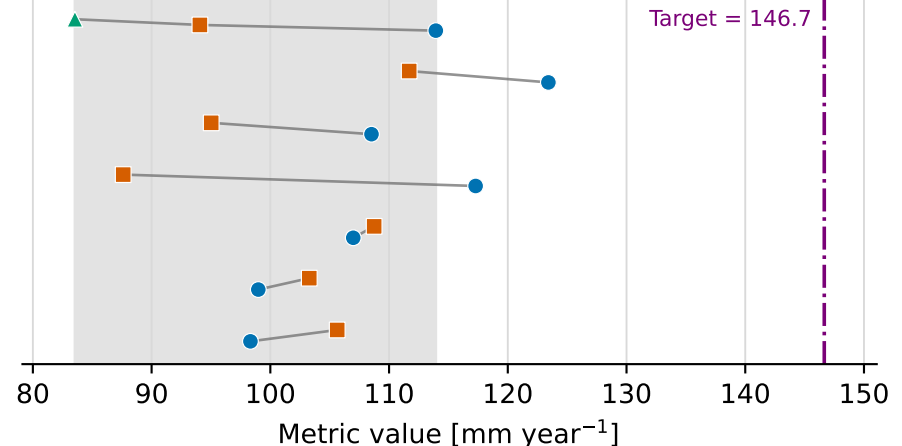

99.9th percentile (closer to HR is better)

Mean annual precipitation (closer to HR is better)

Spatial SD of annual precipitation (closer to HR is better)

This target-context figure is supplementary; the improvement figures provide the clearer training-seed comparison.
